

I will be able to identify
different aquatic biomes.

Fresh water habitats

Zones

- Close to the shore- water lilies
 - Open shore- alga
 - Deep water zone- large fish, worms
-
- What part of the lilly pad absorbs water?
 - Makes food?
 - Allows it to reach the sun?

Wetlands

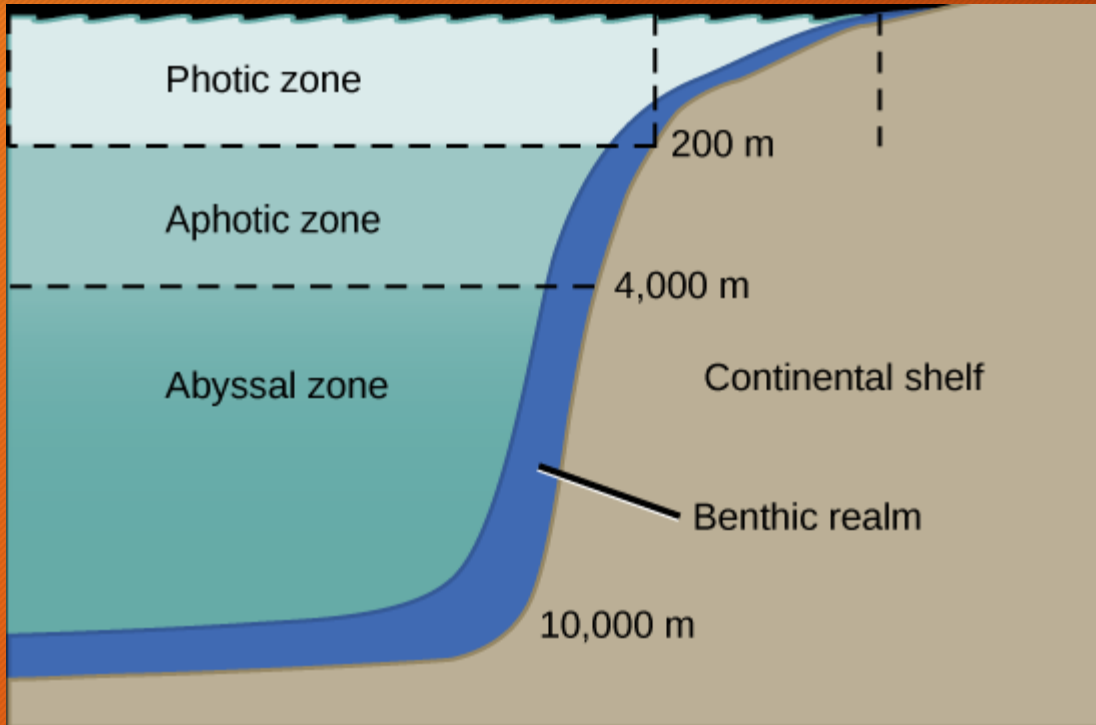

- Covered by shallow layer of water. Ex: swamps and marshes
- Plants have adaptations to filter out salt to survive.

Intertidal zone

- Where the tides go in and out.

Ocean animals adaptations

- Sea otters have streamlined bodies to help them swim
- Anglerfish have photophore that glow to catch prey.
